

Filling, production and development powder-based food and nutrition supplements

- fast - easy - individually -

DE-ÖKO-007

As specialist for the development, production and marketing of functional food powder formulations we enlarged our service portfolio to the field of **contract filling and manufacturing** of powder products.

As a handcrafted company our focus is on the production of small(est) quantities in the range of 1 to 25kg (for product samples) and filling of small(est) series (1-10,000 pieces), to save your company the investment in the necessary investment.

We are therefore not a conventional contract manufacturer, but a specialist for the niche that may is not interesting for the "big ones". We stand for 100% transparency and clearly defined cost.

Working area	Application scale
Contract production mixing for product samples	1 to 50kg
Contract production agglomeration/coating for product samples	1 to 50kg
Contract filling of small series (1 to 10,000 pieces)	0.25 to 25kg

Technical equipment:

In the area of **contract filling and manufacturing** of powder products der we have besides others:

- GLATT laboratory fluidized bed granulator and dryer for product development and small scale sample production (capacity 120kg/h, samples up to 50kg). suitable also for coating
- GLATT fluidized bed granulator and dryer for product development and small scale sample production (capacity 3kg/h, samples up to 1kg). Suitable also for coating and production of final products and small series
- MANCON paddle mixer (capacity 20-120kg/batch)
- ENGELHARDT Dowitec – semi-automatic filling machine (capacity 0.1 bis 5kg, max. 300 pieces/h)
- VTB – fully automatic filling line incl. labelling (0.1kg to 8 kg, capacity up to 1,500 pieces/h)

Biozoon is certified according **DIN ISO 9001/2015 and EG-Organic-regulation (DE-ÖKO-007)**. We have an excellent network of raw material supplier.

A comprehensive quality management system incl. HACCP concept according DIN ISO 9000/2015 is a matter of course as it is the detailed quality control of received raw materials, the final products and the respective documentation.

Furthermore, we use a modern **SAP based ERP system** with automatic Lot generation to ensure traceability along the entire supply chain and separate storage control of your raw material and products.
